3D DESIGN AND ADDITIVE MANUFACTURING HEALTH SOLUTIONS

3D design & SW and AM

Personalized patient care is increasingly becoming reality. This is driven by technological advancements such as 3D printing and advanced image visualization techniques, which have proven effective for clinicians developing tailored surgical approaches and lead to increased patient satisfaction.

mizar alcor
health GRUPO

The power of 3 printing.

For nearly 8 years, Mizar Health has enabled medical 3D printing innovations that deliver personalized care for hundreds of patients each year. In recent years, access to the technology has increased significantly which has supported the 'decentralization' of 3D printing and resulted in increased adoption in hospitals and clinics.

Bringing 3D printing to the point of care.

With this shift from industry Service provider to printing at the POC, new opportunities exist for physicians to deliver more personalized care and increase patient satisfaction. Having a dedicated facility in-house can cut days off the process, support innovation initiatives, and result in lower overall costs incurred by the hospital.

**On call.
On site.**

"We started 3D printing at the point of care based on a clinical need. We were able to expand because we didn't have silos. We allowed surgeons to come with their problems and use 3D printing to solve them. That is how we really grew and we continued to expand."

Dr. Jonathan Morris, Director Anatomic Modeling Lab
Department of Radiology, Mayo Clinic

For Patients

Optimize patient outcomes with diagnostic 3D-printed anatomical models

For Clinicians

Enter the operating room with greater confidence and less stress.

For Hospitals

Lower operating room costs by shortening procedure times and reducing instruments and waste.

"According on the literature-based financial analyses, medical 3D printing appears to reduce operating room costs secondary to shortening procedure times. While resource-intensive, 3D-printed constructs used in patients' operative care provides considerable downstream value to health systems."

All input comes from 'Ballard et al., Medical 3D printing cost-savings in Orthopedic and Maxillo-facial Surgery, Science Direct 2019.'

POST-MARKET

ALL TECHNOLOGIES IN AM. ALL MATERIALS FOR HEALTH.

Electron beam melting (EBM)

Manufacturing through electron beam melting with a ARCAM Q10.

- ✓ **Measurements:**
200 x 200 x 180mm
- ✓ **Materials:**
Titanium alloys Ti6Al4V ELI (Grade 23)
- ✓ **Other Materials:**
Ti6Al4V (Grade 5), Ti-Grade 2, Cobalt-Chromium (CoCr-ASTM F75)
- ✓ **Tolerance:**
Accuracy 0.3% (min +/-0.25)
Minimum thickness 2 mm

Direct metal laser sintering (DMLS)

Manufacturing through metallic alloys laser sintering with a EOS M290.

- ✓ **Measurements:**
250 x 250 x 300mm
- ✓ **Materials:**
Nickel Base Alloys (Inconel 718)
- ✓ **Other Materials:**
Ti6Al4V, AISI316L, Cobalt-Chromium (MP1, SP2), M31 Martensitic Steel, INCO625 and Ni HK
- ✓ **Tolerance:**
Accuracy 0.1% (min +/-0.2)
Minimum thickness 0.8 mm

Selective laser sintering (SLS)

Production through polymers elective laser sintering with a EOS P396.

- ✓ **Measurements:**
350 x 350 x 600mm
- ✓ **Materials:**
Polyamide 12 white
- ✓ **Other Materials:**
Natural or black polyamide 12
Translucide polyamide 11
Polystyrene
- ✓ **Tolerance:**
Accuracy 0.1% (min +/-0.1)
Minimum thickness 0.3 mm

ISO 13485
BUREAU VERITAS
Certification

Fused deposition modeling (FDM)

Manufacturing through plastics fused deposition modeling at a Fortus 400 and Fortus 900.

- ✓ **Fortus 400 measurements:**
406 x 355 x 406mm
- ✓ **Fortus 900 measurements:**
Nickel Base Alloys (Inconel 718)
- ✓ **Materials:**
ASA, ABS (ABS I ABS M30, ABS M30L, ES07)
PC, PC-ABS Y PC-ISO
ULTEM 9085
ULTEM 1010
PIPSF
Nylon 12
- ✓ **Tolerance:**
Accuracy 0.3% (min +/- 0.13)
Minimum thickness 0.5 mm

Material jetting

We use the Objet 500 Connex3 to produce components through material jetting.

- ✓ **Materials:**
Diversity of colours and transparency
Elastomers with different thickness (27-95 ShoreA)
PII and ABS simulation
- ✓ **Measurements:**
490x390x200 mm
- ✓ **Tolerance:**
Accuracy 0.2 (min. 20µm)
Minimum thickness 0.5-0.8 mm

Finishing and cleaning processes

We carry out the necessary additional processes to complete the parts' manufacturing. Apart from a specific manual cleaning and decontamination we carry on validation processes to guarantee the highest quality standard which will allow our clients the component's sterilization before use.

- ✓ **Finishing processes:**
Shot Peening through steel or glass bed.
Corundum blasting.
Polishing through various abrasives.
Verification.
- ✓ **Cleaning processes:**
Rinse and preliminary cleaning.
Heated bathrooms through ultrasonic vibrations.
Water baths on running or demineralized water.
